Backpropagation en Grafos Generales

Backpropagation en un Grafo - Forward

Regla de la cadena

- f(g(x))' = f'(g(x)) * g'(x)
- $\delta f(g(x))/\delta x = \delta f(g(x))/\delta g(x) * \delta g(x)/\delta x$
- Variables intermedias

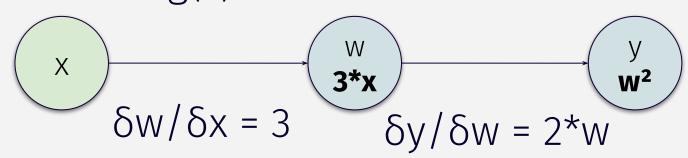

$$\circ$$
 y = f(w)

$$\circ$$
 W = $g(x)$

Regla de la cadena - Ejemplo

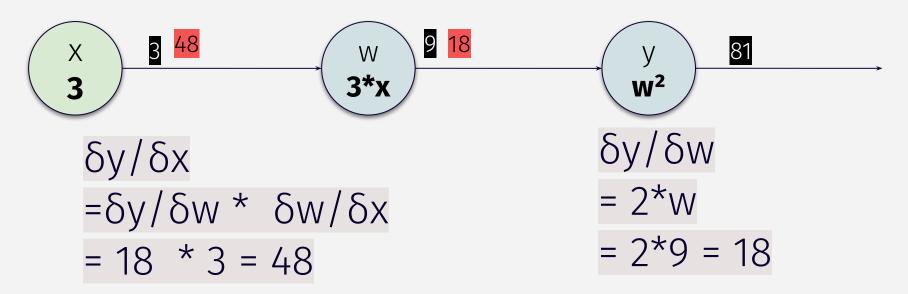

- $f(x) = x^2$
- g(x) = 3*x• $f(g(x)) = (x*3)^2$
- Variables intermedias
 - $\circ y = f(w) = w^2$
 - $\circ W = g(x) = 3*x$

$$\delta y/\delta x = \delta y/\delta w * \delta w/\delta x = 3*(2*w) = 3*(2*(3*x) = 3*2*3*x = 18*x$$

Regla de la cadena - Ejemplo x = 3

- Forma analítica:
- $\delta y/\delta x = 18*x$ • $x = 3 \rightarrow \delta y/\delta x = 18*3 = 48$
- En el grafo:

Backpropagation en un Grafo - Backward
